What is the minimum array area requirement for a solar PV inverter?

Although the RERH specification does not set a minimum array area requirement,builders should minimally specify an area of 50 square feetin order to operate the smallest grid-tied solar PV inverters on the market.

What are photovoltaic panels & how do they work?

They are designed for builders constructing single family homes with pitched roofs, which offer adequate access to the attic after construction. It is assumed that aluminum framed photovoltaic (PV) panels mounted on a "post" and rail mounting system, the most common in the industry today, will be installed by the homeowner.

Do I need to meter a photovoltaic system?

It is assumed that aluminum framed photovoltaic (PV) panels mounted on a "post" and rail mounting system,the most common in the industry today,will be installed by the homeowner. While metering the system is encouraged,the specification does not address system wiring elements for associated system sensors or monitoring equipment.
