

Do I need a building permit to install a PV system?

ordinances requiring certain new buildings to install PV systems.<sup>13</sup> Permitting and inspection Most local governments require a building permit prior to the installation of a PV system to ensure the system meets engineering and safety standards. After installation of a PV system is completed and

Do I need to meter a photovoltaic system?

It is assumed that aluminum framed photovoltaic (PV) panels mounted on a "post" and rail mounting system, the most common in the industry today, will be installed by the homeowner. While metering the system is encouraged, the specification does not address system wiring elements for associated system sensors or monitoring equipment.

What is the minimum array area requirement for a solar PV inverter?

Although the RERH specification does not set a minimum array area requirement, builders should minimally specify an area of 50 square feet in order to operate the smallest grid-tied solar PV inverters on the market.

Can a solar inverter be installed manually?

This allows one to manually isolate the solar system from the home's electric service panel and from the utility grid. Builders should be aware of these local requirements and make accommodations in the AC conduit run accordingly. The builder should not assume that the inverter installed will include an onboard manual AC disconnect switch.

Which type of Inverter should be used in a PV plant?

One-phase inverters are usually used in small plants, in large PV plants either a network consisting of several one-phase inverters or three-phase inverters have to be used on account of the unbalanced load of 4.6 kVA.
