What should be taken when accounting for solar power plants?

Care should be taken when accounting for these assets because while they are in the infrastructure segment, they present a unique risk-return profile. Read on for brief coverage of five critical issues in the accounting for solar power plants.

Does solar power generating equipment need to be depreciated?

For equipment that doesn't last beyond one year, it is placed in the business expense category so there is no need to depreciate it. For the rest of the equipment, an appropriate accounting method should be applied to correct the allocation of costs. Solar power generating equipment is eligible for depreciation.

How do you account for a solar energy lease?

Some solar power projects choose this path as a financial strategy. Modern accounting standards recommend two ways to account for this lease namely operating leases and finance leases. Operating leases are for rental transactions while finance leases go with purchase and sale transactions.

How does accounting affect a power & utility entity's financial statements?

The accounting for financial instruments can have a major impact on a power and utility entity's financial statements. Many utilities use a range of derivatives to manage the commodity, currency and interest rate risks to which they are operationally exposed.
