Are solar panels a problem?

The vast quantity of waste from all of those sources is a concern and we need to find ways to reduce waste, but solar panels are not a major issue in that larger conversation. Solar panels do not contain harmful levels of the toxic materials that often get discussed at public hearings about development.

Are solar panels causing a surge in photovoltaic panel waste?

The coming surge in photovoltaic panel waste is tiny compared to other categories, and most health concerns about solar equipment are unfounded. The Amazon Fort Powhatan Solar Farm in Disputanta, Virginia on August 19, 2022. Credit: Drew Angerer/Getty Images

Are UV absorbers a risk factor for photoallergic dermatitis?

Previous skin lesions, namely, lupus erythematosus, atopic dermatitis, chronic actinic dermatitis, or other photosensitive disorders, seem to be a risk factor to develop reactivity to UV absorbers [98,100,180]. Classical UV filters have been responsible for most cases of photoallergic contact dermatitis.

Are solar panels toxic?

Solar panels do not contain harmful levels of the toxic materials that often get discussed at public hearings about development. The authors found no examples of solar panels for utility-scale development that contain arsenic, gallium, germanium or hexavalent chromium.

Is photoallergy an eczematous eruption on photoexposed skin?

The mechanism of photoallergy parallels that of allergic contact dermatitis, but with the requirement of light-induced activation. Therefore, photoallergy classically presents as an eczematous eruption on photoexposed skin. Nonetheless, phototoxicity and photoallergy can often be clinically difficult to distinguish.

Is cadmium in photovoltaic panels a problem?

The concerns are pervasive, but almost completely separate from reality. For example, one of the recurring issues raised against solar development is the presence of cadmium in photovoltaic panels.

Topical etofenamate causes mostly allergic contact dermatitis, with some cases of photoaggravated or photoallergic contact dermatitis [109, 133, 134].
