

Are cable-supported PV modules prone to vibrations under wind excitation?

However, because the cable-supported PV modules also possess high flexibility and low damping, they are prone to large vibrations under wind excitation. In the present study, a series of wind tunnel tests were conducted to simulate the wind-induced vibration (WIV) of a type of cable-supported PV modules.

Does a cable-supported PV system have aeroelastic instability?

Tamura et al. (2015) experimentally investigated the aeroelastic instability of a cable-supported PV system using a scaled model and concluded that the vibration was closely related to the sag, wind speed and wind direction.

Why do PV modules have a wind tunnel?

The wind tunnel test results indicate that large vibrations occurred when the PV modules encounter strong winds, which seriously threaten the safety of the structure. 4. Suppression of the WIV of PV modules supported by cables

Are cable systems prone to vibrations under wind excitation?

However, as the cable system also has the characteristics of a large flexibility and small damping, it is prone to large vibrations under wind excitation (He et al., 2020, Jing et al., 2017). Wind induced vibration (WIV) of cable-supported system is one of the controlling factors of structural safety.

Why do photovoltaic panels vibrate in a wind tunnel?

Photovoltaic panels supported by suspension cables is tested in a wind tunnel. Strong vibrations occur when the wind speed is above a critical value. The vibrations of the windward panels are much stronger than the leeward panels. The Photovoltaic panels mainly vibrate at the first vertical and torsional mode.

Do building parameters affect wind load of PV modules mounted on roofs?

Banks (2013), Browne et al. (2013), Cao et al. (2013), Kopp and Banks (2013), Pratt and Kopp (2013), Aly and Bitsuamlak (2014), Stathopoulos et al. (2014), Stenabaugh et al. (2015), and Wang et al. (2018) further considered the effects of building parameters on the wind loads of PV modules mounted on roofs.

In terms of structure, flexible support can be roughly divided into single-layer suspension cable system, prestressed double-layer cable system (load-bearing cable + stability cable), ...

The authors gratefully appreciate the financial support provided by the National Natural Science Foundation of China (NSFC 51878014, NSFC 51878013, NSFC ... Analytical ...

DOI: 10.1016/j.jweia.2020.104275 Corpus ID: 224864717; Wind-induced vibration and its suppression of photovoltaic modules supported by suspension cables ...

The IN-ROOF(TM) Cable Truss System is a flexible support system that can be installed in-cycle much faster and easier than existing truss supports. Uncompromising Strength. Our research indicates that the design capacity of ...

Experimental investigation on wind loads and wind-induced responses of large-span flexible photovoltaic support structure. Yi Zhou Ruilingfeng Peng +4 authors Nan Luo. ...

Semantic Scholar extracted view of "Experimental study on critical wind velocity of a 33-meter-span flexible photovoltaic support structure and its mitigation" by Jiaqi Liu et al. ...

suspension cable PV module column bracing (cord) beam of support 1 () Fig. 1 Flexible photovoltaic support arrangement (single span) 2 ...

The suspension cable structure with a small rise-span ratio (less than $1/30$) is adopted in the flexible photovoltaic support, and it has strong geometric nonlinearity. Based on ...

The IN-ROOF(TM) Cable Truss System is a flexible support system that can be installed in-cycle much faster and easier than existing truss supports. Uncompromising Strength. Our research ...

The initial morphology of the double-layer cable truss flexible photovoltaic support is optimized, and the optimization results of different deflection deformation limits and ...

In this study, the wind-induced vibration response characteristics and mechanism of the cable-supported PV module system are studied by using a new type of ...

DOI: 10.1016/j.solener.2024.113096 Corpus ID: 274102260; Wind-induced vibration response and suppression of the cable-truss flexible support photovoltaic module array ...

The general characteristics of aerodynamic vibrations of a solar wing system were investigated through wind tunnel tests using an aeroelastic model under four oncoming ...

tion of the traditional rigid ground photovoltaic support, a long-span flexible photovoltaic support structure composed of the prestressed cable system is being used more and more in recent ...

Recently, a new type of cable-supported photovoltaic system (CSPS) had been proposed. The new structure has light weight and large span, and is cost-effectiveness and ...

The flexible photovoltaic module support system, which can be used in complex and long-span environments, has been widely studied and applied in recent years. In this study, the wind ...

Wind-induced vibration response and suppression of the cable-truss flexible support photovoltaic module array. Yunqiang Wu Yue Wu Ying Sun Xiaoying Sun. ...

The invention discloses an arch-supported flexible photovoltaic support structure, and a flexible photovoltaic support system comprises: the foundation structure is used as a supporting ...

Morphology of Double-Layer Cable Truss Flexible Photovoltaic Supports Zenghui Di 1,2,* , Fei Wang 1,2, Hualong Yu 1,2, Xiang Dai 1,2, Bin Luo 1,2,* and Xin Liu 3 1

The lower load-bearing cables of the double-layer cable truss flexible photovoltaic support are highly susceptible to relaxation under wind suction loads, and, by ...

Product parameters of flexible support for cable truss structure. General parameter. Piece arrangement form: ... Flexible support for a variety of photovoltaic + scenarios. The flexible ...

However, because the cable-supported PV modules also possess high flexibility and low damping, they are prone to large vibrations under wind excitation. In the present ...

The response amplitude of wind-induce vibration is about 8.0 cm, and the probability of collision and hidden crack between photovoltaic module is low. It shows that the ...

The utility model provides a cable truss flexible photovoltaic support, which comprises two columns of vertical columns, wherein longitudinal beams are connected between adjacent ...

Morphology of Double-Layer Cable Truss Flexible Photovoltaic Supports Zenghui Di 1,2, * , Fei Wang 1,2, Hualong Yu 1,2, Xiang Dai 1,2, Bin Luo 1,2, * and Xin Liu 3

Du et al., Ma et al., and Wang et al. also studied the wind load characteristics of the single-layer cable flexible photovoltaic support system with a span of about 20 m and concluded that this ...

DOI: 10.1016/J.SOLENER.2021.08.065 Corpus ID: 239630923; Mechanical characteristics of a new type of cable-supported photovoltaic module system ...

At present when projects such as sewage treatment plant, river course, big-arch shelter need large-span installation photovoltaic support, so big span can't be accomplished to traditional ...

Cable-supported photovoltaic systems (CSPSs) are a new technology for supporting structures that have broad application prospects owing to their cost-effectiveness, ...

Flexible photovoltaic (PV) support [1] is a flexible support system composed of PV panels, flexible prestressed cables and steel rods, and so on. Compared with fixed PV ...

Cable truss flexible photovoltaic support

The cable truss flexible photovoltaic support (CTFPS) is mainly composed of load-bearing cables, stability cables, and struts, with a higher overall stiffness which ...

The dynamic characteristics of the cable-truss flexible photovoltaic support system and the double-layer cable-supported flexible photovoltaic support system are compared. The ...
