How to improve efficiency of data center cooling system?

Youshida et al. proposed a novel system incorporating cold supply to data center and heat supply to other facility. In this system, the heat from data center was stored in TES, and supplied to absorber together with post-heating source to enhance the efficiency of cooling system. 5.3. TES integrated free cooling system

Why should data center cooling system be integrated with cooling system?

Requirement of high security and high cooling load in data centers leads to the development of data centers cooling system as a separate field. TES integrated with cooling systems in data center is usually applied to realize multi-targets including lower cost and higher operational security.

Can thermal storage reduce the electricity bill for Datacenter cooling?
