

Do you use solar energy to generate electricity at home

How do I choose the best way to use solar electricity?

Before deciding on the best way to use solar electricity at home, assess the potential solar energy that can be produced at your address. Because PV technologies use both direct and scattered sunlight to create electricity, the solar resource across the United States is ample for home solar electric systems.

How do solar panels work?

Also known as photovoltaic (PV) systems, solar panels absorb sunlight and convert energy from the sun into electricity you can use in your home. This can be stored in a battery or converted into AC power that is distributed throughout your home's electrical system.

How can I get solar energy into my home?

Solar energy is a key way to get more from your property, insure yourself against power outages, and save some money. You can get solar energy into your home by installing panels on your roof, which is the most obvious method. However, there are other options as well.

How do solar panels generate electricity?

This process is constant: Over 500 million tons of hydrogen atoms are converted into helium every second, resulting in photons that generate solar energy here on Earth. In a nutshell, solar panels generate electricity when photons (those particles of sunlight we discussed before) strike solar cells. The process is called the photovoltaic effect.

Is solar power right for You?

There's plenty to consider before you decide whether solar power is right for you. When you use a solar panel system -- also called a photovoltaic or PV system -- to produce power for your home, you won't have to buy as much electricity from the utility company, and you get the benefits of renewable energy.

Do solar panels work with a power grid?

Most residential solar systems are designed to work in conjunction with the existing power grid. Grid-tied systems allow you to draw power from the grid when your solar panels aren't producing enough electricity. If your solar panels produce more energy than your home requires, you may even be able to sell excess energy back to the grid.
