

# How much is the return on investment of 60 photovoltaic panels

How do you calculate the return on investment for solar panels?

The return on investment of a solar panel installation depends on its location, performance, efficiency and size, but 10% is average. To calculate the ROI for solar panels, divide your net profit over the lifetime of your panels by the cost of their initial purchase and installation. Then multiply by 100.

How much is a solar return on investment?

Here, the net return on the investment could be considered \$20,000 (\$36,000 in value, less \$16,000), which divided by \$16,000 and multiplied by 100% would equal a solar ROI of 125%. Although we have just illustrated how to calculate your solar ROI, this formula should always be taken with a grain of salt.

Do solar panels have a positive ROI?

A positive ROI means that over the lifetime of your solar panels -- usually between 25 and 35 years -- the amount of money you save on energy bills or earn through your solar panels will be greater than the initial investment cost. It usually takes about 10 years to cross that threshold with the federal solar tax credit and about 13 years without it.

How do you calculate solar payback?

To calculate your solar panel return on investment (ROI), subtract your solar payback period from 25 (the expected number of years a solar panel lasts). Multiply your result by your annual energy cost. For example, 25 minus your solar payback period of 11 is 14.

What is a good ROI for solar panels?

The average ROI for solar panels in the U.S. is about 10%, but results vary. Olivia Ellis of Solar SME explained to us that "a good ROI for solar panels is considered to be between 6% and 8%." In some cases, ROI may be as high as 20% or more, though. ROI is usually given as a percentage, representing your profit relative to your investment.

How much does a solar panel cost?

With energy and fuel prices soaring, households across the USA will only see increased benefits from solar over the next few years. On average, solar panel costs in the U.S. range from \$17,612 to \$23,236 for a 10 kilowatt (kW) installation (that's after the federal solar tax credit).

You can calculate your own potential solar panel investment return or talk to a few local solar providers to get quotes that are more specific to you and a clear understanding of the fees...
