What is the best solar panel mounting system for metal roofs?

S-5! ProteaBracket for Trapezoidal Metal Roof Solar Panel Mounting ProteaBracket (TM) when combined with solar panel mounting rails or the S-5 PV Kit, is a versatile PV mounting solution for exposed-fastened metal roofs. It fits most trapezoidal sheet metal roof profiles with and without intermediate insulation.

How do you mount a solar panel on a metal roof?

Peel adhesive backing and apply bracket to the metal roofing panel. Securely fasten the bracket through the pre-punched holes using the appropriate S-5! fasteners or Bulb-tite rivets for the supporting roof material. Combined with the S-5-PV Kit, the ProteaBracket is an integrally grounded solar panel mounting solution.

How do you install a protea bracket on a metal roofing panel?

The ProteaBracket is mounted directly onto the crown of the roofing panel, straddling the profile. No surface preparation is necessary. Peel adhesive backing and apply bracket to the metal roofing panel.

Will brackets fit a slim panel?

These brackets can be made to fit the slim panel if you drill out the panel mounting holes to 5/16"; thus potentially violating the panel warranty. There will be very little clearance between the bottom of the bolt and the back of the panel.

Do nut & bolts line up in solar panel?

The nuts and bolts don't line up in solar panel. The nut has a winged flange for additional security. Depending on the location of the mounting hole relative to the panel frame, that may need to be shaved. Helpful?
