What is the performance gap in solar energy assessments?

One primary finding from the current validation assessment is presented in Figure ES-1 - solar energy assessments have a median performance gap of approximately 3.1%, with predicted energy being greater than measured production. Figure ES-1 Project-average validation results, adjusted for interannual irradiance variability

What data sets should be used for reliability analysis of solar PV systems?

Further, significant advancements in materials, manufacturing processes, operations, and maintenance strategies are observed. Therefore, a reliability analysis of solar PV systems should be carried out using four types of data sets: field failure data, expert evaluations, reliability tests, and relevant data available in the literature.

What are the risks associated with small-scale solar power installations?

All operations on small-scale solar power installations require training to recognise the various risks and to take the appropriate safety and health measures. The manufacture, disposal or recycling of PV systems can lead to exposure to chemicals.
