Could rope constructions be a solution for dual-use solar systems?

Rope constructions could be an interesting solution for dual-use solar systems as agrophotovoltaics, Hans G&#252;nter Czaloun elaborates in his guest article. The South Tyrolean engineer has several patents in this field and exhibited a prototype model at Intersolar Europe 2017 in Munich.

How to transport solar panels safely?

In some cases, you might find that solar panels are too large or heavy to transport safely on your own. In these situations, it's worth considering professional transportation or delivery services. These services have the right equipment and experience to safely transport solar panels. Finally, remember to check the weather before transportation.

Can a solar rope construction system be used for car parks?

A model of a solar rope construction system for a car park. A further possible application of the system is the use as sun protection for car parks. So far complete systems cannot be distributed yet though, only patent rights and know-how.

Could rope constructions be the future of agrophotovoltaics?

Pilot agrophotovoltaic installation in South Tyrol with a rope system. Rope constructions could be an interesting solution for dual-use solar systems as agrophotovoltaics, Hans G&#252;nter Czaloun elaborates in his guest article.

How does a PV module work?

The device uses your existing fiberglass Werner or Louisville extension ladder. A pulley system is attached to the top of the ladder. A patented module "hook" attaches to the edge of a PV module frame and prevents lateral sliding of the module in the hook. An operator pulls the rope to raise the module.

How to pack solar panels for transport?

When you're preparing solar panels for transport, it's time to bring out your inner packaging expert. Solar panels should be enclosed with protective materials like bubble wrap, accompanied by cardboard or wooden boards on either side to offer additional security and to maintain flatness.

Use ropes or straps to tie the panels down, preventing movement during transport. However, avoid applying too much pressure or over-tightening the straps, as this could cause damage. In some cases, you might find that solar ...
