

What to do if photovoltaic panels have no market

Can solar panels be remarketed?

Some solar equipment brokers have realized the economic opportunity of remarketing decommissioned solar panels. "Non-shattered panels always have someone who's willing to buy them and put them back into use somewhere in the world," explained Jay Granat, owner of Jay's Energy Equipment, a wholesale solar brokerage firm.

How to keep solar panels out of landfills?

Another way to keep solar panels out of landfills is through panel reuse, either by direct reuse or after refurbishment. When reused, solar panels get a second life generating clean energy at a different location.

Are solar panels safe to use?

While in use, solar panels safely generate electricity without creating any air emissions. However, like any source of energy, there are associated wastes that need to be properly recycled or disposed of when solar panels reach their end of life. As the solar photovoltaic (PV) market grows, so will the volume of end-of-life panels.

How do I dispose of solar panels?

Homeowners with solar panels on their houses should contact their state/local recycling agencies for more information on disposal/recycling. Federal solid and hazardous waste regulations (i.e., the RCRA requirements) apply to solar panels when they are discarded.

Is resale of used solar panels a good idea?

In the solar industry, resale of used panels is just beginning to take off. Some solar equipment brokers have realized the economic opportunity of remarketing decommissioned solar panels.

Should I buy used solar panels?

If you are purchasing for personal use, you should keep in mind that renewable energy tax credits are not extended to used solar panels. Searching for the best deal when buying used solar panels requires diligence. However, it is worth it as used panels can deliver significant savings over new.

Regulators and industry players need to start improving the economics and scale of recycling capabilities before the avalanche of solar panels hits.
