How do I install a SolarEdge inverter?

This symbol is also used in this manual. A SolarEdge inverter may be installed in a site with a generator. SolarEdge requires installing a physical or electronic interlock, which will signal to the inverter when the grid has been disconnected. Interlock procurement, installation, maintenance and support are the responsibility of the installer.

How do I connect my inverter to the SolarEdge Monitoring portal?

Turn ON the AC to the inverter by turning on the circuit breaker on the distribution panel and turning on the AC/DC Safety Switch. Wait for the inverter to connect to the SolarEdge monitoring portal. This may take up to two minutes. S_OK: Indicates that the connection to the SolarEdge monitoring portal is successful.

How do I set up my inverter?

Menus may vary in your application depending on your system type. During first time installation: Upon activation completion, in the SetApp, tap Start Commissioning. If not already ON - turn ON AC to the inverter by turning ON the circuit breaker on the main distribution panel.

How do I change the grid voltage on my SolarEdge inverter?

If permitted by local authorities, use the SolarEdge Configuration Tool to change the settings. Grid Voltage is below the limit permitted in this country. Verify that the inverter is set to the correct country. Consult the grid operator. If permitted by local authorities, use the SolarEdge Configuration Tool to change the settings.

How do you ground a 3 phase inverter?

Use only copper conductors rated for a minimum of 90°C/ 194°F. For the SE10KUS, SE20KUS, SE33.3KUS three phase inverters where opposite polarity DC conductors are routed in the same conduit, 1000V rated cables must be used. 1. Insert the grounding cable through the AC drill guide. 2. Connect the cable to the equipment grounding bus-bar.

How do you connect a DC inverter?

Connect the DC, as follows: Connect the red wire to any of the DC+ terminals in the inverter. Connect the black wire to any of the DC- terminals in the inverter. 3. Connect the AC wires according to the labels on the AC terminal blocks, as follows: 4. Tighten the screws of each terminal with a torque of 0.88-1.1 lb.*ft / 1.2-1.5 N*m. 5.

Activate the inverter according to the activation instructions supplied in the inverter package. 6. Verify that the inverter is configured to the proper country or grid setting: Press the LCD light ...

Verify proper connection of power optimizers: Before the inverter is turned ON, each power optimizer produces 1V safety-voltage. Use a voltmeter to verify it for each string using a ...
